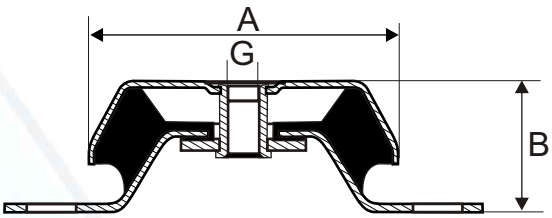
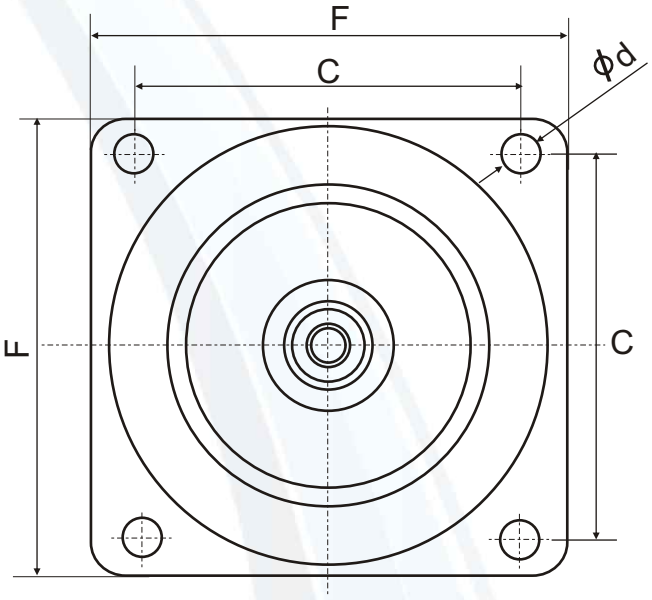
SOPORTES - MOUNTS - SUPPORTS

E&B RUBBER METAL

EGA-180





The mounts Egamount provide an elastic support mechanism for equipment isolation and protect against any unwanted vibrations. They may be used in generator sets, motors, pumps, rolling mills, printing machinery, textile machinery...
With the EGAMOUNT shock is avoided as well as the transmission of noise and vibration to the surrounding equipment. The horizontal stiffness is greater than the vertical stiffness. This prevents any unwanted sliding movement of equipment.
Thanks to the specific design, rubber does not come into contact with oil or grease. This model has built in fail safe design which means it suitable for mobile applications.

Todos los modelos están fabricados con la arandela de seguridad (Fail Safe).
All models are manufactured with Lockwasher (Fail Safe).
